

## Full-Time / Permanent: Quality Assurance (QA) / Software Tester

### Company Profile

Iseehear inc. Life Sciences (Iseehear) develops scientific data management solutions and smart laboratory clouds that address the needs of biomedical researchers in academic institutions, contract research organizations, biotech companies and pharmaceutical companies enabling them to accelerate medical research, innovation and competitiveness.

### Position Description and Expectations

Iseehear is looking to fill a position for QA / Software Tester. The successful candidate will work closely with our development team and deployment team across the entire software design, development, testing and deployment process to verify web application software integrity. The candidate will be responsible for ensuring that all web applications function and operate as designed and efficiently.

You are expected to stay informed about Iseehear products and initiatives, ready to apply your knowledge for successful software deployments. Your success is measured by team and individual productivity as well as overall company performance. You get great satisfaction from knowing that customers have a positive and productive experience using Iseehear applications and services.

### Job Type:

- QA / Software Tester
- Full-time / Permanent
- Start Date: Immediate
- Work in office and remotely
- Location Ontario, Canada (preferably in the GTA)

### QA / Software Tester Responsibilities:

- Interact with the software development team
- Interact with the software deployment team and participate in software deployments
- Participate in the application approval process to provide input on completeness of functional acceptance criteria, product designs and schedules.
- Identify interdependencies, ambiguities or omissions, and make suggestions to improve requirements and ensure usability and testability.
- Design test plans, scenarios and procedures to determine product quality or release readiness for mobile application, web application & etc.
- Develop testing scenarios and test cases to address areas such as database impacts, software scenarios, regression testing, boundary testing, negative testing, error or defect retests and usability.
- Document test procedures to ensure repeatability and compliance with standards.

# (HCMO) - Iseehear inc. Life Sciences
